Brief Research Statement

- Nonlinear dynamics. Bifurcation theory and dynamical systems analysis, both in low and high dimensional systems:
 - global bifurcations in laser with injected signal model
 - pulse dynamics in reaction-diffusion equations (Fitzhugh-Nagumo type and complex Ginzburg-Landau equation).
- Applications in sociology and economics:
 - Herding effect in financial markets. See press releases *Nature*, *Physical Review Focus*, *diario El País*, *Cinco Días*, *La Gaceta de los Negocios*, *Clarín*.
 - Evolutionary Game Theory: study of a Prisoners Dilemma with local interactions and an evolving network. This work has been presented in several conferences.
